- Prescription writing and printing, including medication reconciliation, improve patient safety
- Fax-to-referral-MD helps enhance continuity of care
- A content editing feature ensures consistency with your protocols

KRAMES[®]
PATIENT EDUCATION

Discharge ER patients in less than 3 minutes with Krames Exit-Writer™.

“Krames Exit-Writer is fifty percent cheaper...and significantly faster than our previous method of discharging patients (handwritten/preprinted instructions).”

— Ed M. West, MD, FACEP, Medical Director & Chair,
Department of Emergency Medicine, Santa Rosa Hospital

Exit-Writer™ is the industry leader for patient discharge instructions. Because the software was designed by a practicing, board-certified emergency physician, it functions the way emergency medicine professionals think. It's easy to learn and use, with no formal training required.

The Exit-Writer software program offers everything your facility needs to quickly, easily and effectively discharge patients from your ER.

Emergency medicine discharge instructions.

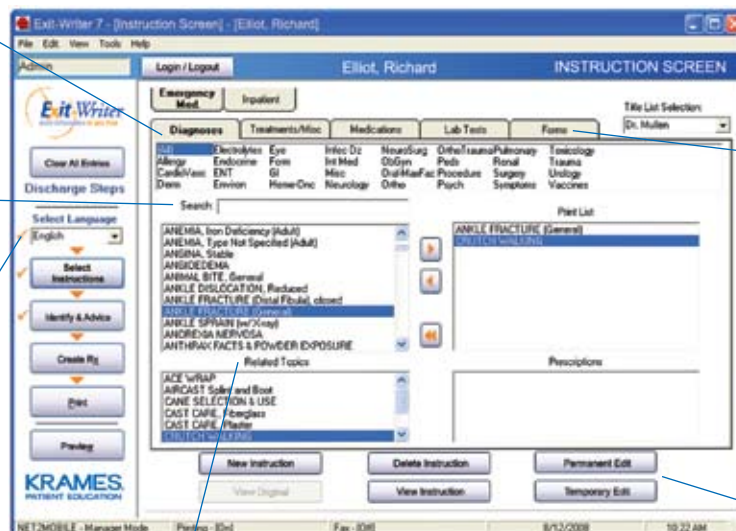

From just two primary screens, the program makes it easy to discharge patients quickly with just the right amount of information.

The Instruction Screen offers over 3,000 easy-to-find patient instruction topics.

Browse through a wide range of topics on diagnoses, treatment options, medical devices, health promotion topics, medications and lab tests.

Find any topic in seconds with the easy-to-use search function.

All instructions are provided in English and Spanish. Plus, 150 of the most popular topics are also available in Chinese, Russian and Vietnamese.

Access forms to assist with informed consent, school and work-release, and more.

Easily edit content permanently or for a specific session.

View related topics for all content selections.

The Patient Entry Screen allows you to quickly enter patient and physician information, special instructions and notes.

Eliminate redundant entry by linking to your registration system.

Select the attending or referral doctors from a list or automatically from the hospital's system.

Select referral physicians and instructions from pull-down menus to quickly provide follow-up instructions.

Indicate tests performed and print related instructions.

Add additional discharge advice or instructions. Choose common phrases from a list or add your own.

Automatically fax notes or a summary of the care you provided directly to the referral doctor.

Prescription writing and printing improve patient safety.

Exit-Writer reduces clinician time spent hand-writing prescription medications and receiving calls from confused pharmacists. Use the prescription-writing feature to create legible and accurate prescriptions quickly and easily.

Medication reconciliation made easy.

Exit-Writer's Medication Reconciliation Tool gives your facility a fast and easy way to document and record patient medication status and comply with medication safety requirements. An electronic copy of all information given to the patient is captured in the patient record.

License content for integration with your HIS or EMR.

Exit-Writer can interface with your existing technology to fit your workflow. An EMR function allows you to electronically save information on prior patient visits for retrieval and quality assurance audits. You can share data with your hospital information systems through an optional HL7 interface. Or you can license content to add directly into your applications. Call for details.

Exit-Writer content is also available in the Krames On-Demand print-on-demand application. Call 800-967-8225 to learn more.

Discover Exit-Writer's industry-leading patient discharge instruction content.
